

Community Solar

No sunny rooftop required.

Subscribe to a community solar project. Get clean energy and reduce your electric bill by 5%. Really!

The Oregon Community Solar Program allows thousands of Oregonians to power their homes with solar energy, even if they don't own their home or have a sunny roof. You can too, by subscribing to a large off-site solar project being built here in Oregon. It's easy to enroll, there's no up-front cost, and you will save ~5% (or up to 30%! See below.) on your electric bill once the solar farm is completed. Businesses, HOAs, and other entities with electric bills can sign up, too. All you need is a recent electric bill or your account number.

With the Oregon Community Solar Program you:

- Don't need to own your home
- Don't need a sunny roof suitable for solar
- Can take your subscription with you to a new home within your utility's service area
- Aren't responsible for repairs and maintenance of the solar array
- Must be a customer of PGE, Pacific Power or Idaho Power

Find out more and sign up today at:

**Community Energy Project
Income guidelines**

	Maximum Annual Income
1 person	\$41,668
2 people	\$54,515
4 people	\$80,168

Power your home with clean energy and start making a difference today

Efficient home electrification is a win-win for you and the planet:

- Healthier indoor air quality
- Lower utility bills
- Greater comfort
- More resilience against climate chaos
- A healthy home and planet

Join the electrify movement!

Sign up at electrifypdx.org for a yard sign and helpful resources. As you clean up your electric supply and electrify each system in your home, apply badges to your sign. Get certified when your home is 100% powered with clean energy.

What can I electrify?

How you heat and cool your home. How you heat your water and cook your food. Where your energy comes from. How you drive or ride. And more!
